

## California Proposition 65 Compliance Statement

Proposition 65, “The Safe Drinking Water and Toxic Enforcement Act of 1986”, is California legislation that requires businesses to provide a clear and reasonable warning about significant exposures to chemicals that cause cancer, birth defects, or other reproductive harm. An official list of these substances is published and updated by the California Environment Protection Agency Office of Environmental Health Hazard Assessment (OEHHA) and can be found at [www.oehha.ca.gov/proposition-65/proposition-65-list](http://www.oehha.ca.gov/proposition-65/proposition-65-list).

Seachrome prides itself on being proactive on all compliance matters, and is committed to ensuring that the products it manufactures or sells meet or exceed applicable safety and related standards, including the recently amended Proposition 65 requirements.

Seachrome is committed to providing quality products to all their customers. Some components used in the manufacturing and assembly of their products contain chemicals or materials which have been identified by the State of California and are present on the official list. Exposure levels are influenced by many factors, including the intended use or application of the product. If Seachrome products are not installed, operated, and maintained in accordance with the manufacturer’s instructions, there is a potential risk of exposure to substances, including nickel, which are known to the State of California to cause cancer, birth defects or reproductive harm.
